

**Welcome to VOZ!**

Thank you for selecting VOZ as your communications provider.

## Getting Started

Your **Cisco ATA-186** Analog Telephone Adapter Kit includes the following items:

- Analog Telephone Adapter
- One (1) Network Cable
- Power Adapter

Before you begin, you will also need:

- A High-Speed Internet connection (cable/DSL/wireless/other)
- A Regular analog touch-tone telephone or FAX machine

### Step 1: Activate your VOZ account.

If you already have subscribed to VOZ, you can skip to Step 2. Otherwise, visit [www.vozpr.com](http://www.vozpr.com) or call 1-787-723-1100 to subscribe.

### Step 2: Connect your ATA-186 Analog Telephone Adapter

1. Connect your analog telephone or fax to the PHONE 1 port. If you have a second VOZ line, repeat with PHONE 2 port.
2. Connect the Ethernet cable provided to the ATA-186 10BaseT port. Connect the other end of the cable to your broadband modem or an open port on your router/switch.
3. Connect the included power adapter to the ATA-186's power port, and plug the power adapter into a grounded outlet or surge protector.
4. The Function button on top of the ATA-186 will blink for approximately 2 minutes. DO NOT power off the ATA-186 during this time. Once the Function button stops blinking, you are ready to make a call.
5. Pick up the telephone. If you have a dial tone, CONGRATULATIONS! You have successfully setup your VOZ service. If not, please call VOZ Customer Service at 787-723-1100 or email [support@vozpr.com](mailto:support@vozpr.com)
